

CIS Critical Security Controls

CSC 1

Inventory of Authorized and Unauthorized Devices

Actively manage (inventory, track, and correct) all hardware devices on the network so that only authorized devices are given access, and unauthorized and unmanaged devices are found and prevented from gaining access.

CSC 2

Inventory of Authorized and Unauthorized Software

Actively manage (inventory, track, and correct) all software on the network so that only authorized software is installed and can execute, and unauthorized and unmanaged software is found and prevented from installation or execution.

CSC 3

Secure Configurations for Hardware and Software on Mobile Devices, Laptops, Workstations, and Servers

Establish, implement, and actively manage (track, report on, and correct) the security configuration of laptops, servers, and workstations using a rigorous configuration management and change control process in order to prevent attackers from exploiting vulnerable services and settings.

CSC 4

Continuous Vulnerability Assessment and Remediation

Continuously acquire, assess, and take action on new information in order to identify vulnerabilities, and to remediate and minimize the window of opportunity for attackers.

CSC 5

Controlled Use of Administrative Privileges

Track, control, prevent, and correct the use, assignment, and configuration of administrative privileges on computers, networks, and applications.

CSC 6

Maintenance, Monitoring, and Analysis of Audit Logs

Collect, manage, and analyze audit logs of events that could help detect, understand, or recover from an attack.

CSC 7

Email and Web Browser Protections

Minimize the attack surface and the opportunities for attackers to manipulate human behavior through their interaction with web browsers and e-mail systems.

CSC 8

Malware Defenses

Control the installation, spread, and execution of malicious code at multiple points in the enterprise, while optimizing the use of automation to enable rapid updating of defense, data gathering, and corrective action.

CSC 9

Limitation and Control of Network Ports, Protocols, and Services

Manage (track, control, and correct) the ongoing operational use of ports, protocols, and services on networked devices in order to minimize windows of vulnerability available to attackers.

CSC 10

Data Recovery Capability

Properly back up critical information with a proven methodology for timely recovery.

CSC 11

Secure Configurations for Network Devices such as Firewalls, Routers, and Switches

Establish, implement, and actively manage (track, report on, and correct) the security configuration of network infrastructure devices using a rigorous configuration management and change control process in order to prevent attackers from exploiting vulnerable services and settings.

CSC 12

Boundary Defense

Detect, prevent, and correct the flow of information transferring networks of different trust levels with a focus on security-damaging data.

CSC 13

Data Protection

Prevent data exfiltration, mitigate the effects of exfiltrated data, and ensure the privacy and integrity of sensitive information.

CSC 14

Controlled Access Based on the Need to Know

Track, control, prevent, correct, and secure access to critical assets (e.g., information, resources, systems) according to the formal determination of which persons, computers, and applications have a need and right to access these critical assets based on an approved classification.

CSC 15

Wireless Access Control

Track, control, prevent, and correct the security use of wireless local area networks (WANs), access points, and wireless client systems.

CSC 16

Account Monitoring and Control

Actively manage the life-cycle of system and application accounts – their creation, use, dormancy, deletion – in order to minimize opportunities for attackers to leverage them.

CSC 17

Security Skills Assessment and Appropriate Training to Fill Gaps

Identify the specific knowledge, skills, and abilities needed to support defense of the enterprise; develop and execute an integrated plan to assess, identify and remediate gaps, through policy, organizational planning, training, and awareness programs for all functional roles in the organization.

CSC 18

Application Software Security

Manage the security life-cycle of all in-house developed and acquired software in order to prevent, detect, and correct security weaknesses.

CSC 19

Incident Response and Management

Protect the organization's information, as well as its reputation, by developing and implementing an incident response infrastructure (e.g., plans, defined roles, training, communications, management oversight).

CSC 20

Penetration Tests and Red Team Exercises

Test the overall strength of an organization's defenses (technology, processes, and people) by simulating the objectives and actions of an attacker.

The CIS Critical Security Controls as the Basis for Cybersecurity Audits

Daily headlines of significant cyber intrusions with their associated effects on consumers and citizens have generated an outcry from the public and lawmakers to demand better performance in cybersecurity for enterprises in every sphere. Executives and board directors have become sensitized to the problem but are, for the most part, still largely unaware of how best to protect their IT and sensitive data.

Jane Holl Lute, Chief Executive Officer of the Center for Internet Security (CIS), frequently meets with CEOs and CIOs of major companies and government organizations who are grappling with the cybersecurity problem. As the former Deputy Secretary and Chief Operating Officer for the Department of Homeland Security, Jane understands the challenges facing leaders who must make tough choices about how to allocate resources to cybersecurity. The problem has shifted from a traditional technology and product view of security to also include the executive's view of the risk to the business. Therefore our solutions (both as individual enterprises and as communities) must bridge this gap in a manner that can be openly described, assessed, shared, and negotiated.

Getting Started: Ask and Answer Key Questions

- What am I trying to protect?** Create a prioritized list of business- or mission-critical processes and inventory the computing assets that map to those processes. This information will be crucial for creating a baseline of your current capabilities against the CIS Critical Security Controls.
- Where are my gaps?** For each business- or mission-critical asset, compare existing security controls against the CIS Critical Security Controls, indicating the sub-controls that the existing controls already meet and those they do not meet.
- What are my priorities?** Based on your identified gaps and specific business risks and concerns, take immediate tactical steps to implement the Top 5 Controls and develop a strategic plan to implement the other Controls.
- Where can I automate?** As you plan your implementation of the Controls, focus on opportunities to create security processes that can be integrated and automated using tools that relieve skilled security and administrative staff of grunt work. The Controls were specifically created to enable automation. The goal is to more rapidly and efficiently deliver accurate, timely, and actionable information to the system administrators and others who can take proactive steps to deter threats.
- How can my vendor partners help?** Some vendor solutions significantly improve and automate implementation for the Critical Controls, especially in terms of continuous monitoring and mitigation. Contact your current vendors to see how they can support your implementation of the CIS Critical Security Controls and compare their capabilities with other vendor products.

The Configuration Benchmarks Community

The Center for Internet Security (CIS) develops and distributes secure configuration benchmarks and automated configuration assessment tools, and certifies security software products designed to help organizations improve their security posture. The internationally recognized benchmarks are developed through an open, consensus-based process and are aligned with the CIS Critical Security Controls. Cybersecurity and industry professionals from around the world volunteer to participate in CIS's open security benchmark development community. New and updated benchmark development efforts are continually launched for a wide array of system, network and device technologies. The CIS Configuration Assessment Tool (CIS-CAT) enables organizations to identify system vulnerabilities, assess configurations against the benchmarks, and monitor security improvement over time. For more information on CIS-CAT or CIS Benchmark membership, visit ciscosecurity.org.

Security through Collaboration

The Center for Internet Security (CIS) is a not-for-profit organization that is dedicated to enhancing the cybersecurity readiness and response among public and private sector entities. Utilizing its strong industry and government partnerships, CIS combats evolving cybersecurity challenges on a global scale and helps organizations adopt key best practices to achieve immediate and effective defenses against cyber attacks. CIS is home to the Multi-State Information Sharing and Analysis Center, CIS Benchmarks, and CIS Critical Security Controls. To learn more, please visit ciscosecurity.org or follow us at [@CISecurity](https://twitter.com/CISecurity).

Where to Learn More

Here are some additional resources for effective planning and implementation of the CIS Critical Security Controls

- I) SANS courses on planning and implementing the CIS Critical Security Controls include:

TWO-DAY COURSE

SEC440: Critical Security Controls: Planning, Implementing and Auditing

This course helps you master specific, proven techniques and tools needed to implement and audit the Critical Security Controls as documented by the Center for Internet Security. SEC440 does not contain any labs. If the student is looking for hands-on labs involving the Critical Controls, they should take SEC566.

sans.org/course/critical-security-controls-planning-implementing-auditing

FIVE-DAY COURSE

SEC566: Implementing and Auditing the Critical Security Controls – In-Depth

The course shows security professionals how to implement the controls in an existing network through cost-effective automation. For auditors, CIOs, and risk officers, the course is the best way to understand how you will measure whether the Controls are effectively implemented.

sans.org/course/implementing-auditing-critical-security-controls

- 2) The SANS Solution Directory posts case studies of organizations that have successfully implemented the Controls and seen immediate benefits.

sans.org/critical-security-controls/vendor-solutions

- 3) Summits where managers from user organizations and strategists from vendor companies share lessons learned and plan for future improvements.

sans.org/summit

- 4) The Center for Internet Security delivers world-class cybersecurity solutions and best practices in order to prevent and rapidly respond to cyber incidents to enable an environment of trust in cyberspace.

POSTER

41ST EDITION

The CIS Critical Security Controls are the Core of the NIST Cybersecurity Framework

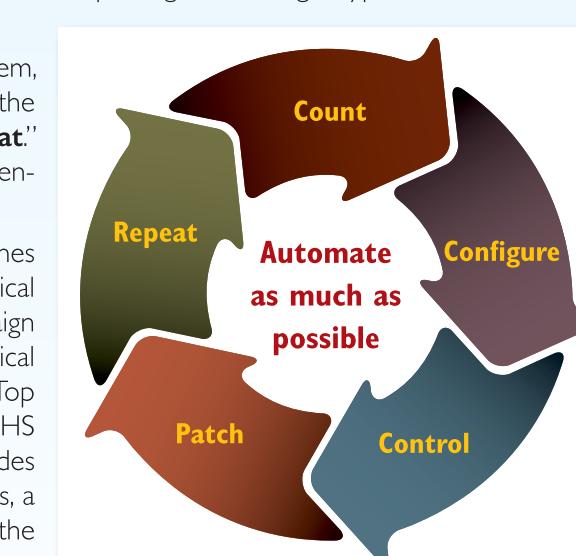

Since its release in February 2014, the NIST Framework for Securing Critical Infrastructure Cybersecurity has become a major part of the national conversation about cybersecurity for the critical infrastructure and beyond. (The Center for Internet Security was an active participant in the development of the Cybersecurity Framework, and the CIS Critical Security Controls are called out as one of the "Informative References" that can be used to drive specific implementation).

The Framework provides a way to organize, conduct, and drive planning on security goals and improvements, for individual enterprises and across communities of enterprises. But it does not include any specific risk management process, or specify any priority of action. Those decisions and judgments are left to the adopter to manage for their specific situation and context.

CIS believes that this task is beyond the ability or resources of most enterprises to do effectively and repeatedly. And this approach doesn't recognize the interdependency that every enterprise has with its many vendors, partners, suppliers, and customers. This is why the Controls take a community-first approach by considering attacks that we all face today, translating them into specific actions that are embodied in the Controls, and then creating a community to help enterprises remove barriers to positive action. This approach emphasizes the common threat that we all face, shares the labor and insight needed to identify solutions, and does so in a open way that can be explained and shared no matter the compliance framework, regulatory framework, or demands from the marketplace.

To the right is an example of the working aids that CIS maintains to help our community leverage the Framework. This chart shows the mapping from the CIS Critical Security Controls (Version 6.0) into the most relevant NIST CSF (Version 1.0) Core Functions and Categories.

CIS Critical Security Controls (V6.0)	Identify	Protect	Detect	Respond	Recover
1 Inventory of Authorized and Unauthorized Devices	AM				
2 Inventory of Authorized and Unauthorized Software	AM				
3 Secure Configuration of End-User Devices		IP			
4 Continuous Vulnerability Assessment & Remediation	RA		CM	MI	
5 Controlled Use of Administrative Privileges		AC			
6 Maintenance, Monitoring, and Analysis of Audit Logs		AE	AN		
7 Email and Web Browser Protections		PT			
8 Malware Defense		PT	CM		
9 Limitation & Control of Network Ports, Protocols, and Services		IP			
10 Data Recovery Capability				RP	
11 Secure Configuration of Network Devices		IP			
12 Boundary Defense			DP		
13 Data Protection		DS			
14 Controlled Access Based on Need to Know		AC			
15 Wireless Access Control		AC			
16 Account Monitoring and Control		AC	CM		
17 Security Skills Assessment and Appropriate Training		AT			
18 Application Software Security		IP			
19 Incident Response and Management		AE	RP		
20 Penetration Tests and Red Team Exercises			IM	IM	

These questions, and the actions required to answer them, are represented in plain language by the Top 5 Priorities of the Campaign: "Count, Configure, Control, Patch, Repeat." To support the Campaign, volunteers have created documentation and toolkits to guide implementation.

Although the language is simple and catchy, behind the scenes each of these questions is associated with a primary CIS Critical Security Control that provides an action plan. The Campaign is also designed to align with the first five of the CIS Critical Security Controls, the Australian Signals Directorate's Top Four Strategies to Mitigate Targeted Intrusions, and the DHS Continuous Diagnostic and Mitigation Program. This provides a strong and defensible basis for the Campaign Priorities, a growth path for maturity beyond these basic actions, and the benefits of a large community of experts, users, and vendors.

The National Campaign for Cyber Hygiene has been jointly adopted by the Center for Internet Security (home of the Multi-State Information Sharing and Analysis Center) and the National Governor's Association Homeland Security Advisory Council as a foundational cybersecurity program across many state, local, tribal, and territorial governments.
